# T-LAB X3
NEW FOR '22

T-LAB X3.22
DIRECTIVES FOR INNOVATION

- Starting point: Don't fix what is already outstanding. The exceptional performance and ride quality of the T-Lab X3 cannot be compromised.

- Look to enhance the X3's qualities based on its DNA; more lateral stiffness and related responsiveness without affecting the comfort-enhancing advantages of titanium.

- Optimize the multi-strata capability of the frameset based on the feedback of forward-thinking T-Lab riders.

.22 GEO

Optimized geometric configuration – featuring a slacker HT angle + longer rake – delivers enhanced multi-surface performance and stability without compromising manoeuverability.

T-BONE SS

Reimagined, singular seatstay design augments torsional stiffness of the back triangle while optimizing vertical compliance and improving the integration of accessory mounts.

FRONT FACE LIFT

New (and still 100% carbon) XD2 fork combines with an optimized downtube profile to streamline the front-end of the bike while maximizing stiffness-to-weight.

STIFFER ST

Recessed integration of the front derailleur hanger allows us to go with a straighter, even stiffer seat tube design, enhancing shifting accuracy for 2x builds.
